

**Zoning Division** 

# LAND DEVELOPMENT CODE AMENDMENT

<b>PETITION</b>	SUMMARY OF AMENDMENT:
PL20230014143	This amendment eliminates the floor
ORIGIN	Land Development Code (LDC) that

**Growth Management** 

(GMCD)

Community Department

This amendment eliminates the floodplain management provisions from the Land Development Code (LDC) that are duplicative to the flood provisions in Chapter 62 of the Collier County Code of Laws and Ordinances (Code of Laws) or the Florida Building Code.

## COLLIER COUNTY PLANNING COMMISION (CCPC) RECOMMENDATION

Approved with recommendation

### **BACKGROUND**

The National Flood Insurance Program (NFIP) is managed by the Federal Emergency Management Agency

**Zoning Division** 

(FEMA) to provide "insurance to help reduce the socio-economic impact of floods." As of August 2023, there are currently 22,642 communities participating in the NFIP nationwide, including 468 in Florida. Collier County has been participating in the NFIP since 1979, which is when the County first adopted a flood damage prevention ordinance (Ord. 79-62). Subsequent repeals and amendments to the ordinance occurred in 1985, 1986, 1987, 1990, and 2005.

The Florida Division of Emergency Management (FDEM) serves as the State Coordinating Agency for the NFIP and works with communities to ensure that local floodplain ordinances either meet or exceed the minimum requirements of the NFIP. In 2010, the FDEM drafted a model ordinance, to provide guidance to local jurisdictions throughout the State of Florida to assist in adopting the State's higher regulatory standards. In 2011, the Board voted to repeal the County's flood damage prevention ordinance (Ord. 86-28) and adopt a new ordinance (Ord. 2011-07) to ensure greater consistency between the County regulations and the State of Florida Model Flood Damage Prevention Ordinance. The new County regulations were then amended twice in 2012 and repealed in 2019 to adopt (to the extent applicable) the regulations and policies set forth in the new and revised State of Florida Model Flood Damage Prevention Ordinance.

In 2021, RCQuinn Consulting, Inc., a consultant working on behalf of the FDEM, contacted the County regarding the County's floodplain provisions in the LDC and advised staff to remove any provisions that were either duplicative or in conflict with the flood damage prevention provisions in Chapter 62 of the Code of Laws and Ordinance. This recommendation to amend the LDC was initiated by the FDEM, because FEMA had determined that it can be problematic for a jurisdiction to have multiple regulatory instruments governing the same subject matter. As such, this LDC amendment represents the implementation of the collaborative effort between staff and the FDEM to further designate Chapter 62 of the Code of Laws and Ordinances as the main repository for "flood" regulations. In addition to removing duplication, this LDC amendment also proposes to help clarify the provisions related to mobile homes and recreational vehicles (in LDC section 2.03.09). The proposed text was recommended by the RCQuinn Consulting, Inc., who is working on behalf of FDEM.

*CCPC Recommendation:* On January 4, 2024, the CCPC recommended approval of the LDC amendment, contingent upon relocating the proposed text below into Chapter 62 of the Code of Laws and Ordinances:

"If the repair, reconstruction, or improvement of the streets, utilities, and pads equals or exceeds 50 percent of the value of the streets, utilities, and pads before the repair, reconstruction, or improvement has commenced, existing mobile homes shall not be required to comply with the requirements of Chapter 62 of the Code of Laws and Ordinances unless those homes are substantially improved or substantially damaged."

#### FISCAL & OPERATIONAL IMPACTS

There are no anticipated fiscal impacts to the County, except for the cost of advertising an ordinance amending the LDC and Code of Laws and Ordinances.

#### **GMP CONSISTENCY**

The proposed LDC amendment has been reviewed by Comprehensive Planning staff and may be deemed consistent with the GMP.

**EXHIBITS**: A) Letter from FDEM

intended through its design and construction to collapse under specific lateral loading forces

without causing damage to the elevated portion of the building or the supporting foundations system.

Buffer (also, landscape buffer): Land or a combination of land and vegetation for the separation of 1 use from another and the alleviation of adverse effects of 1 use to another.

\* \* \* \* \* \* \* \* \* \* \* \*

Cluster development: A design technique allowed within residential zoning districts or where residential development is an allowable use. This form of development employs a more compact arrangement of dwelling units by allowing for, or requiring as the case may be, reductions in the standard or typical lot size and yard requirements of the applicable zoning district, in order to: increase common open space; reduce the overall development area; reduce alterations and impacts to natural resources on the site; to preserve additional native vegetation and habitat areas; and, to reduce the cost of providing services, including but not limited to central sewer and water.

Coastal high hazard areas: The evacuation zone for a Category 1 hurricane as may be established in the regional hurricane evacuation study applicable to the local government. For floodplain management purposes, the term is defined in Chapter 62 of the Collier County Code of Laws and Ordinances.

Coastal zone: Refers to all land and territorial waters west of SLOSH zone 1 line (approximately U.S. 41, for most of the county), including water and submerged lands of oceanic water bodies or estuarine water bodies; shorelines adjacent to oceanic waters or estuaries; coastal barriers; living marine resources; marine wetlands; water-dependent facilities or water-related facilities on oceanic or estuarine waters; or public access facilities to oceanic beaches or estuarine shorelines; and all lands adjacent to such occurrences where development activities would impact the integrity or quality of the above.

Fire station services, ancillary: Fire protection activities imperative to carry out the purposes of a government establishment primarily engaged in firefighting, such as fire training camps, but which is not required to be located at a fire station for that fire station to serve its function. However, services designed to repair any firefighting equipment is not an ancillary fire station service.

Flood: A general and temporary condition of partial or complete inundation of normally dry land area from the overflow of inland or tidal waters or the unusual and rapid accumulation or runoff of surface waters from any source.

Flood elevation determination: A determination by the County Manager or designee of the water surface elevations of the base flood, that is, the flood level that has a one percent or greater chance of occurrence in any given year.

Flood insurance rate map (FIRM): An official map of Collier County, Florida, on which the County Manager or designee has delineated both the special hazard areas and the risk premium zone applicable to the community.

Flood insurance study (FIS): The official report provided in which the Federal Emergency Management Agency (FEMA) has provided flood profiles, as well as the Flood Insurance Rate Maps and the water surface elevation of the base flood.

Flood-plain: Area inundated during a 100-year flood event or identified by the National Flood Insurance Program as a special flood hazard area and A Zone or V Zone on Flood Insurance Rate Maps or Flood Hazard Boundary Maps.

Flood prone area: Any land area susceptible to being inundated by water from any source (see definition of "flood").

Floodway: The channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than one foot.

Floor area: The sum of the gross horizontal areas of the several floors of a building measured from the exterior faces of the exterior walls or from the centerline of common walls separating 2 buildings, excluding attic areas with a headroom of less than 7 feet, enclosed or unenclosed stairs or fire escapes, elevator structures, cooling towers, areas devoted to air conditioning, ventilating or heating or other building machinery and equipment, parking structures, and crawl space where the ceiling is not more than an average of 48 inches above the general finished grade level of the adjacent portion of the lot, except as may be otherwise indicated in relation to particular districts and uses.

\* \* \* \* \* \* \* \* \* \* \* \*

Subdivision: The division of land, whether improved or unimproved, into 3 or more contiguous lots, parcels, tracts, tiers, blocks, sites, units, or any other division of land any of which do not equal or exceed 10 acres, for the purpose, whether immediate or future, of transfer of ownership or development; or any division of land if the extension of an existing street or the establishment of a new street is involved to provide access to the land. The term includes resubdivision, the division of land into 3 or more horizontal condominium parcels or horizontal cooperative parcels, and the division or development of residential or nonresidential zoned land, whether by deed, metes and bounds description, devise, intestacy, map, plat, horizontal condominium parcels, horizontal cooperative parcels, or other recorded instrument, and, when appropriate to the context, means the process of subdividing or to the lands or areas subdivided.

Substantial damage: Damage of any origin sustained by a structure whereby the cost of restoring the structure to its before damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred.

Substantial improvement: Any reconstruction, rehabilitation, addition, or other improvement of a structure, the cost of which equals or exceeds 50 percent of the market value of the structure before the start of construction of the improvement, this term includes structures which have incurred "substantial damage", regardless of the actual repair work performed. The term does not, however, include any project for improvement of a structure to correct existing violations of state or local health, sanitary, or safety code specifications which have been identified

by the local code enforcement official and which are the minimum necessary to assure safe living conditions; or any alteration of a historic structure.

10. Flood program requirements. All travel trailers, park model travel trailers, recreational vehicles and accessory structures shall comply with the current Collier County Flood Damage Prevention Ordinance [Code ch. 62, art. II] if permanently attached to the ground or utility facilities.

#### 3.02.00 - FLOODPLAIN PROTECTION

#### 3.02.01 - Reserved Findings of Fact

- A. The flood hazard areas of the County are subject to periodic inundation, which could result in loss of life, property damage, health, and safety hazards, disruption of commerce and governmental services, extraordinary public expenditures for flood protection and relief, and impairment of the tax base, all of which could adversely affect the public health, safety, and general welfare.
- B. These flood losses are caused by the cumulative effect of obstructions in flood plains causing increases in flood heights and velocities, and by the occupancy in flood hazard areas by structures vulnerable to floods or hazardous to the lands which are inadequately elevated, floodproofed, or otherwise inadequately protected from flood damages.

## 3.02.02 - Reserved Purpose

It is the purpose of this section to promote the public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas by provisions designed:

- A. To protect human life and health:
- B. To minimize expenditure of public money for costly and environmentally unsound flood control projects;
- C. To minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;
- D. To minimize prolonged business interruptions;
- E. To minimize damage to public facilities and utilities, such as water and gas mains, electric, telephone and sewer lines, streets, and bridges located in areas of special flood hazard;
- F. To help maintain a stable tax base by providing for the sound use and development of flood prone areas in such a manner as to minimize future flood blight areas;
- G. To ensure, to the greatest degree possible, that potential home buyers are notified that property is in an area of special flood hazard; and

48 49 To ensure that those who occupy the areas of special flood hazard assume responsibilities for their actions.

# 3.02.03 - Reserved Applicability

This section shall apply to all areas of special flood hazard in the unincorporated area of the County, and identified by the Federal Insurance Administration in its flood insurance rate map (FIRM), dated November 17, 2005, and any revisions thereto.

(Ord. No. 08-08, § 3.D)

## 3.02.04 - Reserved Exemptions

Mobile homes to be placed in an existing mobile home park shall be exempt from the requirements of this section, provided such mobile home park is not expanded or undergoes substantial improvement as defined herein.

#### 3.02.05 - Reserved Basis for Establishing the Areas of Special Flood Hazard

The areas of special flood hazard, are identified by the Federal Insurance Administration, in a scientific and engineering report entitled "The flood insurance study" for the County's unincorporated area, dated June 3, 1986, with accompanying FIRM, dated November 17, 2005, The flood insurance study and accompanying FIRM shall be on file and be open for public inspection in the office of the Clerk to the BCC located in Building "F", Collier County Courthouse, 3301 Tamiami Trail, East, Naples, Florida 34112.

(Ord. No. 08-08, § 3.E)

## 3.02.06 - Reserved General Standards for Flood Hazard Reduction

In all areas of special flood hazards, the following provisions are required:

- All new construction and substantial improvements shall be anchored to prevent flotation, collapse, or lateral movement of the structure.
- New construction and substantial improvements in the A Zones may be built on unconstrained, but compacted, fill, if in compliance with the Collier County Building Code Ordinance. No significant water is permitted to flow from the subject premises onto abutting properties or into adjoining waters which are not County approved drainage system(s).
- Residential Construction new construction or substantial improvement of any residential structure shall have the lowest floor elevated to or above the base flood elevation.
- Non-residential Construction new construction and substantial improvements of nonresidential structures shall have the lowest floor (including basement) elevated to or above the base flood level or, together with the attendant utility and sanitary facilities, be designed so that, below the base flood level, the structure is essentially waterproofed with

walls substantially impermeable to the passage of water and with structural components having the capability of resisting hydrostatic and hydrodynamic loads and effects of buoyancy. Floodproofing is prohibited in the velocity (V) zones. The property owners shall provide a certification by a registered professional engineer or registered professional architect that the design standards of this section are satisfied.

- All new construction and substantial improvements shall be constructed with electrical, heating, ventilation, plumbing, air conditioning equipment, and other service facilities that are designed and/or located so as to prevent water from entering or accumulating within the components during conditions of flooding.
- All new construction or substantial improvements shall be constructed by methods and practices that will minimize flood damage.
- Openings all new construction and substantial improvements with fully enclosed areas below the lowest floor that are subject to flooding shall be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwaters. Designs for meeting this requirement must either be certified by a registered professional engineer or architect, or meet or exceed the following minimum criteria: a minimum of two (2) openings having a total net area of not less than one (1) square inchfor every square foot of enclosed area subject to flooding shall be provided. The bottom of all openings shall be no higher than one (1) foot above the level of the floor they are to service. Openings may be equipped with screens, louvers, valves, or other coverings or devices, provided that they permit the automatic entry and exit of floodwaters.
- All new and replacement water supply systems shall be designed to minimize or climinate infiltration of flood waters into the system.
  - New and replacement sanitary sewage systems shall be designed to minimize or eliminate inflow of flood waters into the systems and discharges from the systems into flood waters.
- On-site waste disposal systems (including septic tanks) shall be designed and/or located to minimize or eliminate impairment to, or contamination from, them during flooding.
- <del>K</del>. Emergency generators for standpipe systems, in accordance with the requirements of the Collier County Building Code or other applicable County Ordinances, must be located above the base flood elevation level, and all fuel tanks for said generators must be waterproofed and vented above the base flood elevation level.
- Electrical transformer and/or switching vaults, pad-mounted transformers, pad-mounted switches, and related facilities shall be permitted as independent units below the minimum flood elevation level. Such structures may be located within or outside a building, and are not required to be waterproofed or constructed with breakaway walls, provided registered professional engineer or registered professional architect certifies that they will not adversely affect the structural integrity of the building in which they are located or any part thereof.
- All meter enclosures for self-contained electric kilowatt-hour meters serving buildings shall be located above the base flood elevation. If complying with this regulation results in a

vertical distance from finished grade to the center of the meter or meters of more than six (6) feet, the meter enclosure shall be located on the outside of an exterior wall with an unobstructed and ready access from an open exterior stairway. When it is necessary to use a stairway for access to a meter, the vertical distance from the tread of the stairway to the center of the meter shall be four (4) to six (6) feet. The meter shall be placed in a position that will not obstruct stairway traffic. On multi-unit buildings, meters and meter Enclosures will be allowed within the building, provided they are above the base flood elevation and located in meter rooms.

#### 3.02.07 - Reserved Specific Standards for Construction Within Coastal High Hazard Areas

- A. Coastal high hazard areas within the areas of special flood hazard have special flood hazards associated with high velocity waters from tidal surge and hurricane wave wash. Therefore, the following provisions shall apply:
  - 1. All new construction and substantial improvements in the coastal high hazard area shall be elevated on pilings and columns so that the bottom of the lowest horizontal structural member of the lowest floor (excluding the pilings or columns) is elevated to or above the base flood level; and the pile or column foundation and structure attached thereto is anchored to resist flotation, collapse, and lateral movement due to the effects of wind and water loads acting simultaneously on all building components. Wind and water loading values shall each have a one (1) percent chance of being equaled or exceeded in any given year (100-year mean recurrence interval). A registered professional engineer or architect shall develop or review the structural design, specifications, and plans for the construction, and shall certify that the design and methods of construction to be used are in accordance with accepted standards of practice for meeting the provisions this paragraph.
  - 2. All new construction and substantial improvements within the coastal high hazard area shall have the space below the lowest floor either free of obstruction or constructed with non-supporting breakaway walls, open wood lattice-work, or insect screening intended to collapse under wind and water loads without causing collapse, displacement, or other structural damage to the elevated portion of the building or supporting foundation system. For the purposes of this section, a breakaway wall shall have a design safe loading resistance of not less than ten (10) and no more than twenty (20), pounds per square foot. Use of breakaway walls which exceed a design safe loading resistance of twenty (20) pounds per square foot (either by design or when so required by local or State Codes) may be permitted only if a registered professional engineer or architect certifies that the design proposed meets the following conditions:
    - a. Breakaway wall collapse shall result from a water load less than that which could occur during the base flood; and
    - The elevated portion of the building and supporting foundation system shall
      not be subject to collapse, displacement, or other structural damage due to
      the effects of wind on building components (structural and non structural).
      Maximum wind and water loading values to be used in this determination

shall each have one (1) percent chance of being equaled or exceeded in any given year (100-year mean recurrence interval). Such enclosed space shall be usable solely for parking of vehicles, building access, or storage.

- 3. All swimming pools within the coastal high hazard area shall be anchored to a pile or column foundation to resist flotation, collapse, and lateral movement due to the effects of wind and water loads acting simultaneously on the pool. Exception: above-ground pools, for the private use of one- or two-family dwellings that are constructed with a vinyl liner as the main component.
- 4. It is prohibited to use fill for structural support of buildings within the coastal high hazard area. It is prohibited to alter sand dunes and mangrove stands, within the coastal high hazard area, if the County Manager or designee determines that such alteration would increase potential flood damage.

#### 3.02.08 - Reserved Regulations Within the Floodways

- A. When floodways are designated within areas of special flood hazard, additional criteria shall be met. Since the floodway is an extremely hazardous area due to the velocity of flood waters, which carry debris, potential projectiles, and erosion potential, the following provision shall apply:
  - 1. Encroachments, including fill, new construction, substantial improvements and other developments, are prohibited, unless the property owner provides a certification by a professional registered engineer demonstrating that such encroachments shall not result in a significant increase in flood levels during occurrence of the base flood discharge.

#### 3.02.09 - Regulations for Mobile Homes and Recreational Vehicles

- A. No mobile home shall be placed in the coastal high hazard area, as depicted on the county-wide Future Land Use Map, or in a floodway, except in an existing mobile home park or existing mobile home subdivision, or land already zoned to allow mobile home development.
- B. All mobile homes placed, or substantially improved, on individual lots or parcels, in expansions to existing mobile home parks or subdivisions, must meet all the requirements for new construction, including elevation and anchoring.
- BC. All mobile homes to be placed, or substantially improved, in an existing mobile home park or subdivision must be elevated on a permanent foundation such that the lowest floor of the mobile home complies with the minimum requirements of Chapter 62 of the Code of Laws and Ordinances. is at or above the base flood elevation, and securely anchored to an adequately anchored foundation system in accordance with the provisions of this LDC. This paragraph applies to:
  - 1. Mobile homes to be placed, or substantially improved, in an existing mobile home park or subdivision.

- 2. Mobile homes to be placed, or substantially improved, in an existing mobile home park or subdivision, except where the repair, reconstruction, or improvement of the streets, utilities, and pads equals or exceeds 50 percent of the value of the streets, utilities, and pads before the repair, reconstruction, or improvement has commenced. Existing mobile homes that are substantially improved will require reinforced piers or other foundation elements that are no less than 36 inches in height above grade, or have their lowest floor at or above the base flood elevation, if this allows for use of a lower foundation.
- 3. Mobile homes in existing mobile home parks or subdivisions shall be elevated 36 inches above finished grade on reinforced piers when the repair, reconstruction, or improvement of the streets, utilities, and pads equals or exceeds 50 percent of the value of the streets, utilities, and pads before the repair, reconstruction, or improvement has commenced.
- CD. Evacuation plans shall be included in applications for new manufactured home parks and subdivisions, and for expansions to manufactured home parks and subdivisions, in flood hazard areas. The County Manager or designee shall review and approve such evacuation plans. All mobile home parks or subdivisions must develop, and have approved by the County Manager or designee, a plan for evacuating the residents of existing mobile home parks or subdivisions.
- E. All recreational vehicles placed on sites within Zones Al-30, AH, and AE on the community's FIRM shall either:
  - 1. Be on the site for fewer than 180 consecutive days;
  - 2. Be fully licensed and ready for highway use; or
  - 3. Meet the permit requirements of this section, and the elevation and anchoring requirements for "mobile homes" in accordance with this section.
- F. A recreational vehicle is ready for highway use if it is on its wheels or jacking system, is attached to the site only by quick disconnect type utilities and security devices, and has no permanently attached additions.

#### 3.02.10 - Reserved Standards for Subdivision Plats

- A. All subdivision plats shall be consistent with the need to minimize flood damage.
- B. All subdivision plats shall have public utilities and facilities, such as sewer, gas, electrical, and water systems, located and constructed to minimize flood damage.
- C. All subdivision plats shall have adequate drainage provided to reduce exposure to flood hazards.
- D. Base flood elevation data shall be shown on the Master Subdivision Plan.

# 4.01.01 - Elevation Requirements for All Developments

The elevation of all building sites and public or private roadways included within a subdivision or development for which a use other than conservation or recreation is proposed shall be not less than such minimum elevations as adopted by the BCC, Florida Building Code, Chapter 62 of the Code of Laws and Ordinances, FEMA/FIRM, or South Florida Water Management District (SFWMD) criteria. All lawful regulations with reference to bulkhead lines, saltwater barrier lines, and other appropriate regulations regarding land filling, conservation, excavations, demolition, and related regulations shall be observed during the construction of any improvements within Collier County.

C. The design and construction of the required shelters shall be guided by the wind loads applied to buildings and structures designated as "essential facilities" in the <u>Florida</u> Building Code <u>Standard Building Code/1988 edition, table 1205</u>.

floor height requirements shall be accomplished through stem wall construction. Stem walls shall be finished in material and color complimentary to the principal structure.

ii. Open stilt-type construction is not permitted. On front yards, the foundation area below the first floor must be treated with a solid façade or lattice, which is consistent with the architectural style of the building and the floodplain protection standards of <a href="the Florida">the Florida</a> Building Code and Chapter 62 of the Code of Laws and Ordinances section 3.02.00.

9.04.05 - Reserved. Specific Requirements for Variances to Flood Hazard Protection Requirements

#### A. General requirements.

- 1. Variances shall only be issued upon a determination that the variance is the minimum necessary, considering the flood hazard, to afford relief.
- Variances shall only be issued upon:
  - a. A showing of good and sufficient cause.
  - b. A determination that failure to grant the variance would result in exceptional hardship to the applicant.
  - c. A determination that the granting of a variance will not result in increased flood heights, additional threats to public safety, extraordinary public expense, create nuisances, cause fraud on or victimization of the public, or conflict with existing local laws or ordinances.
- 3. In passing upon a variance, the Board of Zoning Appeals shall consider all technical evaluations, all relevant factors, standards specified in other sections of the LDC; and the following criteria:
  - a. The danger that materials may be swept onto other lands to the injury of others;
  - b. The danger to life and property due to flooding or erosion damage:
  - c. The susceptibility of the proposed facility and its contents to flood damage and the effect of such damage on the individual owner;
  - d. The importance of the services provided by the proposed facility to the community;

- e. The necessity to the facility of a waterfront location, where applicable;
- f. The availability of alternative locations, not subject to flooding or erosion damage, for the proposed use;
- g. The compatibility of the proposed use with existing and anticipated development.
- h. The relationship of the proposed use to the GMP and flood plain management program for the area;
- i. The safety of access to the property in times of flood for ordinary and emergency vehicles;
- j. The expected heights, velocity, duration, rate of rise, and sediment transport of the flood waters and the effects of wave action, if applicable, expected at the site;
- k. The costs of providing governmental services during and after flood conditions, including maintenance and repair of public utilities and facilities such as sewer, gas, electrical, water systems, streets, and bridges, and;
- I. Variances shall not be issued within any designated floodway if any increase in flood levels during the base flood discharge would result.
- m. Variances may be issued by a community for new construction and substantial improvements and for other development necessary for the conduct of a functionally dependent use provided that the criteria of (a) through (I) of this section are met.
- n. Generally, variances may be issued for new construction and substantial improvements to be erected on a lot of one-half (½) acre or less in size contiguous to and surrounded by lots with existing structures constructed below the base flood level, providing items (a) through (I) have been fully considered.

#### 10.04.04 - Applications Subject to Type III Review

The following applications are subject to Type III review: Variances; Administrative Appeals; Certificates of Appropriateness; conditional uses; nonconforming Use Amendments; Vested Rights; flood Variances; Parking Agreements.

# Exhibit A – Letter from FDEM

# DIVISION OF EMERGENCY MANAGEMENT

Ron DeSantis
Governor

Kevin Guthrie
Director

October 18, 2023

William Lang, CRS Coordinator Collier County 2800 Horseshoe Drive North Naples, FL 34104

RE: Pending Ordinance to Amend Floodplain Management Provisions

Dear Mr. Lang:

The Florida Division of Emergency Management is designated by the governor to serve as the State Coordinating Agency for the National Flood Insurance Program. In this capacity, the Office of Floodplain Management works with communities to ensure their local floodplain management ordinances meet or exceed the minimum requirements of the NFIP and maintain consistency with the Florida Building Code. We also help communities amend their ordinances.

In 2022, we coordinated the preparation of Ordinance No. 2022-07, adopted by the Board of County Commissioners in March 2022, to amend Ordinance No. 2019-10. We also supported the preparation of Ordinance No. 2022-19 to correct the scrivener's errors in Ordinance No. 2022-07.

The County's floodplain management regulations appear in Chapter 62 of the Code of Ordinances. In early 2021, we notified staff that the Land Development Code should be examined to eliminate conflicting and duplicative floodplain requirements that appear in Sec. 3.02.00, noting that this section should have been repealed as part of Ordinance No 2019-01. We also noted that Sec. 1.08.01 Definitions, should be modified to remove flood terms that will not be used when Sec. 3.02.00 is repealed.

FEMA, in a publication jointly published with the International Code Council, <sup>1</sup> states, "As a general rule, having multiple regulatory instruments governing the same thing is problematic and can lead to at least two distinct problems with interpretation and enforcement." Based on this and conversations with FEMA staff, we work with communities to prepare ordinances to resolve those differences.

In mid-2022, we agreed with the County staff's request to postpone resolving conflicts and duplication until after FEMA issues the Letter of Final Determination. While we waited for FEMA to issue that letter, we worked with County staff to prepare the draft ordinance under consideration. During that effort, additional sections with relevant provisions were identified and examined, leading to coordinating amendments in LDC sections other than those previously identified and amendments to Chapter 62. In August, we notified staff that the draft would result in an acceptable resolution and approved moving the ordinance through the County's adoption process.

Reducing Flood Losses Through the International Codes: Coordinating Building Codes and Floodplain Management Regulations: <a href="https://www.fema.gov/sites/default/files/2020-07/fema\_reducing\_flood\_losses\_rfl\_5th-ed.pdf">https://www.fema.gov/sites/default/files/2020-07/fema\_reducing\_flood\_losses\_rfl\_5th-ed.pdf</a>

# Exhibit A - Letter from FDEM

Please note that FEMA issued the Letter of Final Determination on August 8, 2023. The letter establishes February 24, 2024, as the effective date of the revised Flood Insurance Study and Flood Insurance Study Maps. Before that date, we must advise FEMA whether the County's floodplain management regulations meet the necessary requirements. We urge the County to expeditiously move the pending ordinance through the approval process well in advance of that deadline.

We appreciate the time and attention of County staff and look forward to answering any questions that may arise. Please do not hesitate to contact me at <a href="mailto:Conn.Cole@em.myflorida.com">Conn.Cole@em.myflorida.com</a> or (850) 815-4507.

Sincerely,

Digitally signed by Conn
