

Change-Out of Existing Residential Air Conditioning Equipment

Effective: Jan. 16, 2014

Per the 2010 Florida Building Code 107.3.5 Exemptions, State Statute 553.79(2), and House Bill 269 recently signed with a Declaratory Statement issued by the Florida Building Commission exempting the requirement of heat load calculations and duct sealing certification as part of the permitting process for the change out of existing residential type air conditioning systems, the Collier County Building Department will begin issuing over the counter permits for the replacement or change-out of existing residential type air conditioning units that are 2000cfm or less.
