

Storm Sewer Manholes

A manhole allows access to the underground sewer pipes so they can be inspected and cleaned when necessary. The lid is labeled "storm".

Storm Sewer Systems are **NOT** the same as Sanitary Sewer Systems

The sanitary sewer system goes to a treatment plant.

The sanitary sewer system is maintained by the County.

The storm sewer system goes to your pond.

The storm sewer system is maintained by the HOA.

Manhole Maintenance

Sediment and debris can accumulate inside pipes over the years. Specialized equipment is needed to remove it via these manholes, so preventing yard debris, dirt and litter from entering through inlets reduces these costly maintenance items.

Cracked or missing lids are very dangerous and should be replaced immediately.
