| Other: | | | X | | = |
| Other: | | | X | | = |
| Other: | | | X | | = |
| Other: | | | X | | = |
| Other: | | | Х | | = ,,, |
| <u> </u> | | | | Total Fixture Value Per | |
| | | | | of Units with this Fixture Co Unit Total x Number of Unit | |

^{*}Valves are calculated using a flush rate of 10 flushes per minute (according to Florida Plumbing Code). The flow rate is 10 times the gallons per flush.

The fixture flow value is calculated as follows:

 Number of Valves
 Calculation

 1 - 2
 Flow Rate times Number of Fixtures.

 3 - 10
 Flow Rate times two plus two times the Number of Fixtures.

 11 or more
 Flow Rate times Number of Fixtures divided by two.

^{**}Use total Fixture Flow Value on "Table for Estimating Demand" to estimate water meter demand.

Table for Estimating Demand
